

Don't Let Hemp Leave You High and Dry

*Profit from large-scale hemp
drying from Player Design*

playerdesign.net

Player Design, Inc. (PDI) is a solutions-based engineering and equipment provider specializing in rotary drying technology. Our team works with yours to assess your process requirements and to develop the finest equipment solution at the best value for your production needs.

Plain and simple: if it's not right, we won't do it!

Our experienced engineers, technical personal, and field operations team stand ready to help you. Call PDI today to get started on maximizing your profits.

Large-Scale Hemp Drying

- Delivers premium quality dried hemp for maximum CBD extraction
- Low temperature processing maintains the maximum CBD, CBDa, and terpene concentrations in your biomass, thereby maximizing your profit
- Proven minimum production rates of 40,000 to 60,000 pounds of green hemp biomass processed during a single, 8-hour shift
- Product dried, sanitized, and stabilized for storage and future extraction

Simple and Robust

- Easy to operate: Straightforward yet comprehensive PLC controls with large touchscreen. Remote PLC support is also available.
- Minimum footprint required for maximum biomass throughput. This eliminates the need for hang drying and any associated labor.
- An integrated camera is system available for operations and security monitoring thereby reducing labor costs
- Continuous feed system minimizes biomass handling which both protects your product and also maintains its quality

PDI Scope of Supply:

- Custom green material hopper and in-feed system
- Complete energy system: Biomass, natural gas, and propane options
- Complete dryer system including energy source/burner, fans, ductwork, conveyors, and cyclones
- Comprehensive online temperature, moisture, and control monitoring with active trends
- Automatic combustion system control and temperature regulation
- System start-up and operator training provided
